the brakes to avoid a collision.

① Standard Vehicle Stability Control utilizes sensors that constantly monitor wheel speeds, steering angle, brake pressure, vehicle yaw rate, and lateral g-forces. If the system detects a difference between the driver's intended path and the one the vehicle is actually taking, it can apply braking power and/or reduce engine torque to help correct vehicle path.

① Reverse Automatic Braking monitors the area behind the vehicle while reversing. If an obstacle is detected, the system can automatically apply
