Stability and Traction

Subaru Symmetrical All-Wheel Drive

X-MODE®

① X-MODE optimizes engine output and transmission ratio, increases all-wheel drive system engagement and uses enhanced control of the VDC system to reduce individual wheelspin, providing optimal traction on low-friction surfaces. Onyx Edition, Limited, Onyx Edition Limited, and Touring models include dual-function X-MODE with Snow/Dirt and Deep Snow/Mud modes.

Hill Descent Control (HDC)

① X-MODE also incorporates Hill Descent Control (HDC) that helps to maintain a constant vehicle speed when traveling downhill, enhancing vehicle control.

Vehicle Dynamics Control (VDC)

① Standard VDC electronic stability control utilizes sensors that constantly monitor wheel speeds, steering angle, brake pressure, vehicle yaw rate, and lateral g-forces. If VDC detects a difference between the driver's intended path and the one the vehicle is actually taking, VDC applies braking power and/or reduces engine torque to help correct vehicle path.

Traction Control System (TCS)

① VDC also incorporates an all-wheel, all-speed traction control system that senses a loss of traction and applies braking force to the slipping wheel or wheels as necessary to maintain vehicle motion.

Active Torque Vectoring

① Active Torque Vectoring works in tandem with VDC, applying braking power to the inside front wheel resulting in better handling, sharper turn-in, more neutral steering, and higher cornering limits while turning.

Trailer Stability Assist (TSA)

① Trailer Stability Assist senses any unsafe yaw conditions and automatically applies braking to specific wheels to help driver maintain vehicle control.
