## Subaru Intelligent Drive (SI-DRIVE®)

① SI-DRIVE enables two distinctively different modes of vehicle performance characteristics by regulating the Engine Control Unit (ECU) and by fine-tuning the electronically controlled throttle and Lineatronic CVT shift characteristics.

## Stability and Traction

### Subaru Symmetrical All-Wheel Drive

## Vehicle Dynamics Control (VDC)

① VDC electronic stability control utilizes sensors that constantly monitor wheel speeds, steering angle, brake pressure, vehicle yaw rate, and lateral g-forces. If VDC detects a difference between the driver's intended path and the one the vehicle is actually taking, VDC applies braking power and/or reduces engine torque to help correct vehicle path.

## Traction Control System (TCS)

① VDC also incorporates an all-wheel, all-speed traction control system that senses a loss of traction and applies braking force to the slipping wheel or wheels as necessary to maintain vehicle motion.

## Active Torque Vectoring

① Active Torque Vectoring works in tandem with VDC, applying braking power to the inside front wheel, resulting in better handling, sharper turn-in, more neutral steering, and higher cornering limits while turning.

**Vehicle Dynamics Control (VDC)**

① VDC electronic stability control utilizes sensors that constantly monitor wheel speeds, steering angle, brake pressure, vehicle yaw rate, and lateral g-forces. If VDC detects a difference between the driver's intended path and the one the vehicle is actually taking, VDC applies braking power and/or reduces engine torque to help correct vehicle path.
