| Vehicle Dynamics Control (VDC) | | | | |
| ① Standard VDC electronic stability control utilizes sensors that constantly monitor wheel speeds, steering angle, brake pressure, vehicle yaw rate, and lateral g-forces. If VDC detects a difference between the driver's intended path and the one the vehicle is actually taking, VDC applies braking power and/or reduces engine torque to help correct vehicle path. | | | | |
| Standard | Standard | Standard | Standard | Standard |
| Traction Control System (TCS) | | | | |
| ① VDC also incorporates an all-wheel, all-speed traction control system that senses loss of traction and applies braking force to the slipping wheel or wheels as necessary to maintain vehicle motion. | | | | |
| Standard | Standard | Standard | Standard | Standard |
| Active Torque Vectoring | | | | |
| ① Active Torque Vectoring works in tandem with VDC, applying braking power to the inside front wheel resulting in better handling, sharper turn-in, more neutral steering, and higher cornering limits while turning. | | | | |
