Active Torque Vectoring			
① Active Torque Vectoring works in tandem with VDC, applying braking power to the inside front wheel, resulting in sharper turn-in, more neutral steering, and higher cornering limits when turning.			
Standard	Standard	Standard	Standard
Vehicle Dynamics Control (VDC)			
① VDC electronic stability control utilizes sensors that constantly monitor wheel speeds, steering angle, brake pressure, vehicle yaw rate, and lateral g-forces. If VDC detects a difference between the driver's intended path and the one the vehicle is actually taking, VDC applies braking power and/or reduces engine torque to help correct vehicle path. Includes Standard, Off, and performance-oriented Traction modes.

Traction Control System (TCS)

① VDC also incorporates an all-wheel, all-speed traction control system that when sensing a loss of traction reduces engine torque and applies braking force to the slipping wheel or wheels as necessary to maintain vehicle motion.
